

During this project, you will research a specific time frame to discover major scientific developments and historical events. Using the information from your research, your group will create a time line.

Requirements:

(1) You must discover at least 50 events that address scientific developments and historical events that occurred during your time frame. At least 30 of your items must be related to **science and technology**. Events should be described using the date (day/month/year) and a brief description of the event. If an event relates to an invention, include the inventor's name.

(2) Time lines may be vertical or horizontal in your notebook. Dates must be written in RED ink, while entries must be written in BLACK ink. You may add pictures that relate to the information on your time line.

This is a group project! You will be working with the people that are at your table. You may work as a team of 4-5 or split into groups of 2-3. Everyone must contribute to the process to earn the team grade. Members not giving 100% will earn a reduced grade.

Time Frames:
